Button page with Timer for Output 1, and Latched for Output 2

To edit Output 2 swipe left from the Button Settings page

CHANGING INPUTS

Tap Output 2 On/Off to disable or enable Output 2. Tap Done.

To change Inputs tap *Edit* from the Button page

Status Input indicates the state of a switch/sensor (on/off) For example a magnetic swith could be used to indicate the status of a garage door (open or closed).

A physical switch, (like a pushbutton switch) can be setup to act as a momentary input, latched input, or timed input for My N3RD. When the physical switch is thrown the N3RD will respond accordingly based on how the input settings are configured.

INPUTS

Input 1
Input 2

Purple Wire: Input 1
Gray Wire: Input 2
Black Wires: Ground
